Presentation

Robert Ottenstein {BIO 1498660 <GO>}

Great. Good afternoon, it's Robert Ottenstein from Evercore ISI's Global Beverages and Household Products Team. Really excited to have today, the management of one of the premier growth stories in all our consumer staples, Celsius. With us today we have John Fieldly, CEO; and Jarrod Langhans, CFO. And I'm going to -- I'm just going to jump right into it, we've got a lot of ground to cover. So John a few years ago, Bang Energy had literally knocked down the door, right for a new wave of energy drinks and is showing that there was a consumer and in need, that Monster and Red Bull didn't serve. And now there is like a whole new wave of drinks led by Celsius for sure, but you've got Alani Nu, you got ZOA, C4, Ghost, A SHOC. So there is a bunch of them that and you're clearly leading the pack, but I think it would be interesting to get your views on is in terms of this next generation of brands. Number one, does this characterization that I said kind of makes sense? And then second, what distinguishes Celsius from all these other brands that are in this next generation?

John Fieldly {BIO 17560616 <GO>}

I mean, you make a good point. The success of Bang has really opened the opportunity of the eyes of retailers in a variety of different channels about where consumers are going, what they're looking for. And prior to Bang, if you go to in convenience, I mean you would never find a BCA ingredient in a cooler, nor creatine, a lot of people probably didn't even know what that was and some of those channels like going back on Bang success. Bang has been a great success for the overall category for opportunities that open the eyes that there is a much broader consumer out there and a much even newer consumer coming to the category that wants more out of the beverages they consume, out of the foods they consume. So when you look at where the category is going and even now, I mean we talk about it, Health and wellness, I mean that's been better for you, it's been a category, we talk about.

We can go back to 2018 and '19, when Bang success, everyone was talking about performance energy right, then that I was, like I remember being at NACS in 2018. I mean every retailer we're talking about performance energy Celsius was using that, also as an opportunity to get into that traditional energy drinks channel convenience where we historically have been underrepresented for a variety of reasons. And now we are gaining more traction as we become more mainstream and have really proven ourselves in these other other channels. But when you look at where the Bang success that opened the eyes of the category. I mean, better few ingredients, more function in the food we consume, we all want more flavor and we want something aligned with health and wellness trends now. So that has opened the door for Celsius. As you mentioned, we've been born in fitness and health and wellness. We've born in the gym, as a pre-workout. Now we have broader appeal with our seven essential vitamins, great flavor, great taste and functionality that's proven -- clinically proven with over six clinical studies that we are a thermogenic that help you burn calories and body fat to achieve your health and wellness goals.

So we're more than just an energy drink, which I think is a big opportunity for consumers and what they're looking for. And you do have a lot of competition now. I mean you must go back to 2010-2011 and just in general, the energy category has always had a lot of competition. It is a high growth category, probably one of the best categories in beverage, all of beverage when you look at it. It's been growing 6% to 8%. It's anticipated to double by in the next 12 years. If you look at the CAGR growth. It's shown strong demand, pricing has been strong and the margins have been strong for the brand. So it is a very attractive category for new entrants.

There is a lot of Me Too brands out there, Fast Followers rightfully so. We'll see what they're doing, like as the category is doubling in 12 years at a 6% CAGR, there's a lot of opportunities. What's really attractive to us is that we currently have about number two brand on Amazon. So when you consider Apples and every brand has the same opportunity, Celsius perform at the same level if not better than the leading brands. So right now, we're working on optimizing our DST [ph], gaining further penetration and expansion in convenience and really optimizing our points of distribution, which gets us excited.

Robert Ottenstein {BIO 1498660 <GO>}

And when you look at who your targeted demographic is, is that any -- do you think you put on a different lens than some of the other new brands of the Alani Nu, ZOA, C4, Ghost, A SHOC and is it, your going after the same demographic already to get maybe a slightly different one or...

John Fieldly {BIO 17560616 <GO>}

I mean every brand has their own purpose, right and their own targeted consumer they're going after. I think what's unique about Celsius is we are very much open and really a unisex brand. We're encompassing, we're inclusive. So if you look at our brand tone, our brand story and our brand attributes, I mean, health and wellness trends are unisex. We're 50/50 male/female. Historically because of our fitness lifestyle, we've been 24 to really like 34 is age demographics, but what we're

noticing as we're gaining more broader distribution, our age demographics has gone down is 18/24 male/female and we're seeing the growth to the category really these new consumers coming in Gen-Z.

They're aligned with the brand attributes that Celsius stands for live fit with healthy. We provide that essential energy for the Gym and for your life and for your afternoon workout, pickup, next class, semester, next meeting. So we're all about in our DNA, living healthy, living better, living life to the fullest and that's really resonating with much younger demographic historically and consumers of all walks of life, what's interesting we have an 18-year-old drinking Celsius and then you also have a 67-year-old drinking Celsius as well and then the attributes of the green tea, seven essential vitamins and have these additional attributes, it's just a much broader consumer, then we were looking back and thinking performance energy, if you go back to 2018. So I think we're well positioned right now and where consumers are, where they're going and we're resonating extremely well with the next generation and energy.

Robert Ottenstein {BIO 1498660 <GO>}

Clearly. So when, as we talk to different people throughout the chain, retailers and distributors. It seems that there is -- that the business momentum is actually building and increasing and just getting stronger. And clearly, while you're bringing in some new consumers, you're also taking a fair amount of share. Some of the folks that we talk to, suggest to us that it's more share from Red Bull than Monster. So just wanted to get your thoughts on that? Are you sourcing more from Red Bull than Monster or is it all pretty much the same? And then second what do you see is these key drivers to what feels like a ground swell of increased momentum?

John Fieldly {BIO 17560616 <GO>}

Yeah, I mean we're talking just specifically to Red Bull and Monster. These brands are amazing brands. Both those brands continue to grow at exponential growth rates. Monster's latest data, you just put a report out today -- this morning. I mean still strong growth coming from that portfolio. And then Rebel, just continues to grow as well. I don't -- your latest data said they weren't keeping up with the category growth, but that was a four-week snapshot versus 12 or 24. So, and the category -- will get some ups and downs there, but when we look at it, I'm not really sure like how much share we're specifically taking from them versus the new consumers coming into the category, we're seeing a lot of new growth like if you look at the growth on the category as of the last IRI data as of February 9th, the category grew for period of about \$101 million and we contributed 37% of that growth.

So we're definitely seeing -- we're incremental and I think that's what's a great story here, especially in these retailers. We are not a Me Too product, where we're just looking to take share. We are looking, we are incremental to your category. We're hoping dollar rings to prop any profits and that's another reason to carry Celsius. The other thing we're hearing from insurance like big guys here in New York as an example, we were up there last week with Jerry Rita [ph] and we're talking about some of the activation, and what are you seeing convenience and some of the

independents and the independent managers of stores were saying that Celsius is actually, they're seeing an incremental to them.

If you look back at a Red Bull or Monster, even at Bang, they said when consumers come in, it's like a dietary, it's like a suppression -- food suppressants. They're coming in and just buying those products and then leaving versus with Celsius they're buying a water, they're buying sandwiches and salad and some other food item that they're consuming with the beverage. So when Jarrod and I are talking we're seeing really great opportunities further expanding the usage occasion, just outside of the traditional energy drink occasion that we've seen historically. So we think the opportunity is much larger here when we look at Celsius in the portfolio and we're just talking about energy. We think this is really a big beverage play and that we're seeing those usage occasions expand. That's really got us excited. We have Tony Guilfoyle, he is our EVP of Sales, really working at that in the food service opportunity and we think that's a big opportunity in the future as well. But today the main opportunity is going after that convenience and really optimizing our GST network.

Robert Ottenstein {BIO 1498660 <GO>}

Great. So I think one of the big topics we get on the energy drink side is the general competitive environment in terms of what's going on in pricing, promotional intensity. It's traditionally -- at least for the traditional energy drinks Red Bull and Monster, Rockstar has always been highly promotional, very significant percent of sales sold on promo. So can you talk a little bit about that? I think you had April one price increase, how is how -- what was the magnitude of the April one increase? Was it headline or just reduction in promos, how is that going, any thoughts along those lines?

John Fieldly {BIO 17560616 <GO>}

Yeah, I'll turn that over the Jarrod. I mean, we did spend a lot of time analyzing the pricing and Jarrod, I'll let you jump in on that one.

Jarrod Langhans {BIO 18706067 <GO>}

Yes, so we started rolling out pricing in April, but it's more of a tiered approach. So -- and tiered meaning timing. So we've kind of got three bands of when we'll roll it out and it depends on when we're doing resets. It depends on when we're doing resets. It depends on when did we pick up the customer. So there's a variety of things and the idea is to have it fully rolled out by October. It's hard, we haven't said publicly what that headline price increase is. When you ask is kind of a promo reduction, is it a price increase, what we've been talking about rolling out in April is actual headline price increase, right? Now we can always roll it back depending upon what we need to do.

With that said, over the last year, if you look at our data, you can see that the average price has gone up for us without a price increase, because we have been rolling back on the promos and we have been testing that elasticity and we've seen that it's

actually held up very well even in the circumstances, we've been living in over the last six months. I mean you can see the 200% growth in Q1. It didn't stop the train. So I think from that perspective, we're comfortable with increase in the headline price. We know we can always dial that back if we need to and so we have that lever and you know Monster just announced there is -- we can't speak to other people that haven't announced anything because it would just be speculation, but Monster going as well.

I think we started talking to our customers before they did, but they got out publicly first, but that's been helpful in conversations with our customers. I think from a number of analysts and a number of reports we've seen across the board, energy was kind of the last CPG Company to kind of take their price increase. So, I think it was time for us to do it. I think if we didn't do it now, who knows six months from now, who would have been able to take a price increase. So we're comfortable with when we did it, but we definitely think there is definitely an elasticity there for our products. With it being premium based and more along the lines of that daily copy, where you're going to regardless of what the economy is doing or what life is doing, you're still going to get your coffee in the morning and maybe even another one in the afternoon. So it's same thing with Celsius.

Robert Ottenstein {BIO 1498660 <GO>}

Are you seeing any reduction in promos from Red Bull? I mean my understanding is they haven't taken headline pricing, but any reduction in promos from the Red Bull team?

John Fieldly {BIO 17560616 <GO>}

Yeah, I mean, when you look at, I mean where you look at -- there has been a lot of price elasticity testing promotional adjustments, we've seen that over the last 24 months in the overall category. Everyone is going up a little bit. There are (inaudible), you see they had Red Bull promotion, most recently. I saw that at racetrack here in Florida, where they're going to buy two and get one free. I think that was a newer promo there. So there is -- I think everyone is right now over the last 12-24 months is really testing price (inaudible) to see where the consumer reaction is, where is the -- proper price point. The category has been coming up as Jarrod mentioned, we have been taking price and we feel confident in our pricing. We are a premium player, a premium brands and we offer premium benefits within the category. So -- and our consumers are willing to pay at this point based on the analysis that we had.

Robert Ottenstein {BIO 1498660 <GO>}

So, earlier today we had the management team for Molson Coors on and they had seen at least in their business, their beer business, a little bit of weakness in the C-store channel. And everybody is looking for weaknesses related to gasoline prices. So can you kind of remind us what percentage of your business is in C-stores and are you shifting -- are you seeing any kind of consumer shift from C-stores to larger format?

John Fieldly {BIO 17560616 <GO>}

Well, I think speaking with them have a more of historical business and traction, maybe if you talk to us in the next two years or year-and-a-half now, we might have a different story. But right at where we stand today, when you look at the opportunity we have in convenience and to Jarrod's point, right around 250, 249, we are part of a daily lifestyle, daily routine. So seeing that someone would cut that out of out of their consumption at this juncture, it's going to be later down the road that you start looking at those type of items versus discretionary items, one may cut back to summer travel as we enter into some of these areas and then also, we are hearing some anecdotal information that with gas prices up people are actually frequent to convenience store more often, so therefore that could be actually some tailwinds in the energy category for increased maybe consumption or purchases there, but that's to be determined.

But we've heard that from some individuals that have been Monster for a long time as well, giving some anecdotal information on that. So we have a lot to learn every recession is different. So I don't think, but always looking back at historical patterns, and I think there in the last recession we saw the energy category, it was not severely as impacted as other categories like you mentioned Molson Coors in regards to the beer. So that's something for us to keep an eye and we'll see how that evolves. But whereas we look at it and we bringing on new distribution in convenience, those stores are much more productive than our existing distribution. If you go and talk about stores in the club or grocery, historically so, as an example, we just closed 5,000 Circle K stores. So we're working on resetting those divisions now and those stores are going to be highly much more productive than certain stores that are established in the existing channels.

So I think the other thing that's interesting is this Club Channel for us as well. We started to test the Club Channel in Q2 last year and they rolled this out really a Costco nationwide in late Q3, so we had a full quarter and Q4. And today, when you look at our first quarter results, the club channel represented almost 17% of our total revenues. So it was -- and that was all incremental. We didn't see any effects in regards to scan data that was coming out of Nielsen or IRI during that period. So talk about incremental to the category, other sales within the Club Channel, it really, which is only mainly been Costco is all incremental to our business. We didn't see any cannibalization, which Jarrod and I talk about that a lot, because I thought that was quite interesting to see revenues grow 20% practically overnight and sports all the incremental. And we still grew on Amazon, with the number two energy drink brand on Amazon, we had about 18.3 shares. So it's just really exciting times here at Celsius as we enter summer beverage season on how the brand is reacting with today's health-minded consumer.

Robert Ottenstein {BIO 1498660 <GO>}

So I think -- and this may be dated, but I think Red Bull and Monster is something close to 70% C-stores, where would you be?

John Fieldly {BIO 17560616 <GO>}

So when we look at our mix you, look historically, I mean if we've been right around probably about 25% to 20% on our ACV levels. Historically, if you go back two quarters, right around 35% ACV in convenience. So, well, we're working on in many stores being reset and -- but historically it's been by 25%, 30% of our revenue has been convenience and the biggest chain is really 7-Eleven for us, that has been 7-Eleven has been a big believer in Celsius over the years. Initially launched with them in 2015, January of this year was a great success. We had a mango passion fruit as an exclusive flavor launched with them and it was a great success for us across the country, expanded us more other stores and has really solidified the partnership for 2022 and as we enter 2023 on our innovation as well.

So we think convenience is going to be a major component of our revenues as we go forward and anticipate 70% one day of our revenues coming from convenience. It's just -- it's early for the brands, because that's going back talking about Bang success. Historically the convenience channel has been reluctant on bringing new brands and especially new brands that are fitness -- or in fitness and that's been our DNA. So we built this brand in grocery, mass, drug, club, Amazon and now kind of one calls it and we talked about it all the time. We really backed during the energy category because normally, you'd want to go to convenience first before you go after some of these alternative channels. So I mean food service and vending, micro markets have been a great success now that we're seeing more employees, come back to the office, that's been a great success for us as well. We were in over (inaudible), we're in about 11,000 micro markets and the at work consumption of Celsius was another great usage occasion that we saw opportunities and it's great to see that business come back and I think they're just going to be much more success there in the food service and micro markets.

Robert Ottenstein {BIO 1498660 <GO>}

Great. So kind of a high-class -- high class problem. If you keep your current momentum and things trends kind of continue the way where they are, you're going to be the third largest player relatively soon. When you kind of get to that point and then you're dealing with these two enormous incredibly well managed and strong companies Red Bull and Monster, who are really two of the greatest companies in the world of beverages in my view, phenomenal companies.

John Fieldly {BIO 17560616 <GO>}

I agree.

Robert Ottenstein {BIO 1498660 <GO>}

How -- I mean will you see yourself kind of directly competing against them? I mean you already are, but I mean is that the right question in terms of what do you need to do at that point to compete better against them? Or do you think the brand is different enough, that's not the right question? Just trying to kind of get a sense of

how you're thinking about that next step in your evolution and what you may need to do to get there, whether it's M&A, go into different categories? I mean both of those companies have very different strategies right. Red Bull very pure, limited number of SKUs categories, limited number of doors. Monster went very, very broad, right as many doors as they could get into. So very different strategies. I know it's a little bit further out there, but just trying to get a little bit more sense of that long-term vision?

John Fieldly {BIO 17560616 <GO>}

Yeah. No I mean, we're the number 4 brand in the category now. I mean, looking at the energy category, we just keep -- it leads Rockstar, which is a great accomplishment for the brand, number 4 share right now, a lot of great momentum. It's an exciting time for the Company. We have these discussions all the time. What was going to be -- you're talking to well run amazing companies that you referenced there, Red Bull and Monster. They're not going anywhere, right. The good news is that the category we operate in is -- the category is growing and the category is growing bigger than just the energy category. We see energy as a beverage, right.

So if you look at the top five selling beverages and all beverage, two of those are energy drinks and so two of those SKUs. So we see a bigger opportunity here than just energy. I think there's a lot of room for all of us. We are working on different strategies, further expanding our sales organization, creating that roadmap to success. We expect to be a major player in the beverage category, we have great innovation teams, got our Celsius guideline, what's your Vibe for this summer. We have some great new flavors. We're going broader than our existing consumer base, when you look at our Vibe portfolio with our Peach Vibe, our Tropical Vibe and our Arctic Vibe that we're launching this summer. We have other Vibes lines we'll be expanding on in next year and beyond. So we're really excited about our fruit for combination has broad appeal.

So I mean, when you look at some of the marketing that we're looking at, where we're going to go to market, where we're going to target marketing, we're constantly reevaluating our strategies and optimizing it each and every day as we go forward and the world we live in today is much different than what it's going to look like in tomorrow. And I think you got it as operators, we have to be on the forefront. You've got to be thinking ahead in categories. We offer new drink, we're out executing. And we're doing it under a magnifying glass. So Jarrod has been a great asset to the Company. We'd like to think we're good management team as well here, working hard and we're going to be -- we're going to be -- we're a well run company. We're going to continue to grow. We're going to provide shareholder value and I think we got all the grade systems, bringing in the talent into the company has been like no other. We continue to scale. We continue to grow. We add more resources and most importantly, we continue to execute. So a lot of great things going to be coming from Celsius, in the next several years for sure.

Robert Ottenstein {BIO 1498660 <GO>}

Clearly, clearly. One of the things you mentioned earlier and it's incredibly impressive, a pride point of the over an 18% market share on Amazon. And -- can you

talk a little bit about how the e-commerce channel has actually developed over the last couple of years? Why you've done so well there? And how your -- your -- the profitability of that channel for you compared to other channels?

John Fieldly {BIO 17560616 <GO>}

Yeah, I mean, when you look at it like, we've done extremely well on Amazon. E-com has always been to our core. I mean, if you go back, we couldn't get a distribution network, if you go back even two, three years ago. So building out a distribution network is very difficult. So we had to leverage wholesale direct-to-retail and online and most importantly consumers, it's an omnichannel world. We believe in that from the beginning and it's consumers want it when they want it, how they want. So we have embraced that as an organization with our digital teams, our digital strategies, our project kicked up programs. We have a variety of different strategies that continue to target consumers where they live, work and play. And on Amazon, it's -- it just shows you the brand loyalty we have. I mean to have a consumer spend \$25 on a warm product -- a warm beverage take it home, chill it then drink it as part of a daily routine is very difficult.

And that's what gets us really excited as we move to this impulse purchase opportunity on cold placements, because that's where we see the real velocity increase and the increased usage occasions, the increased consumptions and versus that at home physically waiting for it to be chilled, either taking it with you are bringing it to work or bringing it or just consumption at home. So that's huge, that's massive for us. It's something we've been embraced from the beginning and this is an omnichannel world, especially during COVID. You look at Instacart, you look at Gopuff, I mean there so many other platforms now where consumers are engaging. Look at target.com, walmart.com, each one of our retailers have their own platform and we've embraced that from the beginning versus creating our own B2C program. We've taken a different route and we've partnered with our retailers, embraced our retailers, clients, customers and worked worked through our customers to connect through e-com. And I think that's been a great strategy for us versus trying to keep everything in-house and do it on our own. And it's been a real key components and our retailers want to work with us because they know that strategy. We're not try and steal anyone's customers, we're trying to get them to sell more Celsius and that's the -- that's the key for everyone.

Robert Ottenstein {BIO 1498660 <GO>}

Great. Let's move over talk about the supply chain a little bit, which has been a struggle for everybody over the last couple of years. You can just kind of give us an update in terms of your can supply, any out of stock issues, any shortages, whether in cans or anything else along the supply chain?

John Fieldly {BIO 17560616 <GO>}

Yeah, I'll turn it over to Jarrod. He has been really working on the supply chains.

Jarrold Langhans {BIO 18706067 <GO>}

Yeah, so, we had some issues last year with our supply chain, when it came to cans. But as you know, we've got an abundance of cans at the moment. We did some orders overseas and we finally got all of those shipments in. So if you look at our inventory as of the end of 2021 and as of the end of Q1, we probably had in excess of about three months of inventory intentionally with a lot of companies having supply chain issues, we wanted to make sure we could maintain the significant growth through the summer and that we have plenty of lead time. So probably about 55% of our inventory at the end of Q1 was finished goods, the other 45% was unfinished goods, obviously. So we were in really good shape to continue to meet the demand and we want to keep that. I think we're at about 97% rate in Q1. So we want to keep that rate up because we're not going to make money of products that are on the shelves. We do think that there might be an opportunity for us over the summer. Relative to our competition, we are hearing that some people are having some supply issues.

We are very comfortable and confident that we won't have supply chain issues over the summer, even with our 200% growth rate in Q1 and continued really good accelerated growth rate in Q2. So from a supply chain perspective, we're in great shape. We are carrying more inventory than we normally would. But that's a strategic decision and we expect to be through those international cans as you know by the end of Q3. And we have a great relationship with all the US based can manufacturers and part of that is we did slow down our international can products from being transported from Asia over to here intentionally waiting for prices to go down. And while we are doing that we had an opportunity to do some buying from the can manufacturers in the US, who suddenly had an abundance of supply, because the spikes sell-through industry didn't quite pan out as much as they thought it would. So we were able to help the can manufacturers out and in turn got some great relationships there. So as we churn through the international cans, we're in good shape to purchase in the US. And from a pricing perspective, I think we're seeing actually can prices moderate quite a bit as opposed to continue to grow.

Robert Ottenstein {BIO 1498660 <GO>}

Great. Great. John one of the things that is also notable about Celsius for a brand growing so fast in the US is that you've also got a reasonably meaningful international presence as well. It's -- it's a little -- a little bit here a little bit there kind of thing. It's a little lumpy, but can you talk about how you prioritize investment between the US and international, with the international strategy looks like and reasons to believe that this can be global brand or maybe not, maybe it's a brand just certain countries, it's just kind of how you're thinking about that?

John Fieldly {BIO 17560616 <GO>}

Yeah, no, I mean, for sure, I think it's a global play. I mean just look in the US on Amazon right, number 2 brand, 18 share. We're sitting on a four share now in the stand tracked channels. We go into Costco, we turn into one of the best -- one of the top performing brands in Costco. So this anecdotal information we're getting in the

US shows that we are going after a broad consumer base, a broad consumer that is resonating with the Celsius portfolio. And in the same way these healthy and wellness trends we're seeing in North America or in Europe, they're in Asia. These are global trends and we couldn't be better positioned coming out of the pandemic for health and wellness, everyone wants to live better, live healthier and that's what Celsius stands for. In Sweden, we have roughly approximately around a 10% share in the energy category. When you looked at that and see opportunities to further expand throughout the Nordics. And then also on Amazon with the success we've been, we just recently became available in the UK and Germany.

So, and with the success in the US that has opened the doors to speak with other much larger strategic distribution partners. So, and when you enter new markets, you got to be really strategic on your partner in order to be success and each market is very unique, when you look at that. So, that's something we want to be very cognizant of. In Asia, the opportunities we have there, we have a license and royalty agreement in China. We have distribution in Hong Kong. We actually had a great -- we have a great partner in South Korea, where we're gaining some distribution and sales in velocity. And then in Malaysia as well we're in 7-Eleven's there with our partners and then Australia. So lots of great opportunities around in each country, it's timing and sequencing. We are -- as we know, we're a public company, we're growing. Our goal is to drive profitable growth, meet our EBITDA goals and our strategy for our investors. So timing and sequencing is extremely key. Profitable growth is very important to us as an organization and the management team.

So we're very critical on the investments we make in new markets and the timing and sequencing. So entering new markets is extremely risky. It takes a long time to build a brand. We want to make sure we do it right and we were not going to be over investing in any given new market. So more of a methodical approach will scale. As we see growth and opportunities, we add more resources and investment. So that's been our strategy. We've started -- we've done in a variety of different markets. It's -- it takes time to build brands and it's not going to be built overnight, but we are talking about a global opportunity here for sure and that's what gets us excited.

Robert Ottenstein {BIO 1498660 <GO>}

Great. Well, that's a great way to I think wrap things up. It's been a terrific session. John, Jarrod, thank you very much. Really appreciate it.

John Fieldly {BIO 17560616 <GO>}

Excellent. Thank you, Robert. Thank you, everyone.

Jarrod Langhans {BIO 18706067 <GO>}

Thank you everyone.
