Presentation

Unidentified Speaker

Ready to go. Great. Well, thanks everybody, for joining us. Excited to have Celsius Holdings here again second year in a row. We've got Chairman and CEO John Fieldy, Executive VP Toby David.

It's been an amazingly wild ride for the last 12 months for these guys. Unbelievable sales, stock appreciation, I was looking earlier, up 115% since we were sitting here 12 months ago. Strategic distribution deal with Pepsi announced about ten and a half months ago. Distribution points have doubled since then. It's pretty crazy. I guess we'll see what happens in 12 months when we're sitting here.

So just to start, the Pepsi transition has been unbelievable.

So, Pepsi took a stake last summer, transitioned over in the U.S. to being your distribution partner. It's been as smooth as I think anyone can recall a beverage distribution transition has been. What surprised you?

You know, what could better from here kind of where do we go from specifically looking at the Pepsi distribution standpoint?

Questions And Answers

A - John Fieldy

Yes, Mark, glad to be here. What a way to set it off. We've done amazing the last 12 months, no question about it, since last time were here. It's been like you highlighted since we've been here, we got a 95% ACV out there right now, got about 13.6 SKUs on average. It's been just an all-around great transition.

We probably spent all week going through what we've done to prepare and working through the transition and still optimizing the network today as we stand here. I think it's a couple of key indicators is what I always say great partners build great brands.

So, the AV network was really great. They solidified us. They helped us really build the brand.

We built it on a regional basis.

We converted a lot of our key accounts over to DSD, leveraging that network. And through that transition, I think treating good partners, they assisted with the transition.

A lot of our partners got there was buyouts involved on the transfer of the distribution, so very systematic on that approach. Very clear and open with the partners and being upfront, and they really very much respected that.

I think that allowed us to have a really smooth transition. In addition, we brought on a lot of team members as we started to go through the process on really finalizing the distribution or the Pepsi partnership.

We immediately started hiring some ex-Pepsi sales reps and people involved in the distribution and on the key account side as well. Building the team out with that expertise that knows that network to make that really that transition that much smoother.

I think that is extremely critical. I think Toby and I been with the company now each over 10 years. And the network -- the Pepsi network is very complex, from the distribution to divisions to the key accounts team and how that's all wired together.

So having the right expertise on the team is took us leaps and bounds, making a strategic smooth transition as possible. Also, the other big driver is a lot of our distribution agreements kind of transitioned at the same period of time.

So, I know there's been a lot of other brands that have transitioned to different networks, but a lot of the prior agreements ended in like 60 days and 90 days termination clauses within those agreements. What we did, we transitioned about 80% of our distributors over on October 1st.

So, we had a really kind of one light switch transition to some of these key accounts switching over, which makes it that much easier.

So, the challenge you have is your distribution set up in all these different vendor numbers, right?

Because all these independent distributors or ABI distributors had unique vendor numbers, so they all needed to be set up correctly.

So, it wasn't easy. There was a lot involved on the key account transition to distributor transition, the education on the brand, and we're still doing that today.

So, but it's been a phenomenal to your point, I've been a great transition. You see the numbers in the ACV, additional placements out there and still optimizing. There's a lot of further optimization to go, and we're not done by any means. There are a lot of different opportunities there. I don't have anything to add on that.

A - Toby David {BIO 20749891 <GO>}

I would say as far as answering the second half of your question about what surprises the most, the success in food service that we've seen so quickly.

So traditionally, energy plays and convenience and maybe club and grocery and mass, but not typically in food service.

With Pepsi John, called out on our last earnings call, about 10% of our Pepsi revenue was coming through food service, and that was really only in three or four months of getting some seeds laid within that division.

So, we truly feel like Celsius expands the usage occasion of beverage within the energy category. And partnering with Pepsi is going to provide us with a platform to get the drinks out there to restaurants, fast casual, college and university hospitals, hotels, vending really a massive opportunity for us.

A - John Fieldy

I think the other surprise is that 95% ACV we talked about in our plans internally, we didn't expect to hit that for another 24 months, 18 months. I think seeing the brand that we received in a much broader distribution network was a real surprise.

The velocity we're seeing in some of the new markets where we haven't never marketed before, seeing the product turn in some of these new markets has been somewhat surprising along the way.

A - Unidentified Speaker

Thinking about the ordering patterns right since you transition every customer, every supplier relationship is going to be a little bit different. I know you had a little bit more sales into the channel last quarter as you increased distribution points. Do you think the channel inventories are in the right spot at this point as you head into summer?

Do you think you still need more product to be sold in so that they don't run out of product, especially given your sales trends?

A - John Fieldy

Yes. We got full visibility within -- what they're holding in their mixing centers and some inventory levels. I think they're in a good position.

We did see we keep an eye on it. We're trying to keep our inventory levels up as well. We're entering 100 days of summer.

We have a huge program going on with all of our sales reps as well as the Pepsi frontline reps, working on a variety of different display activations, retail marketing programs.

So we're really excited about that. It's our first summer at a 95% ACV, so we got a ton of activation from the Hamptons and California, a lot of events going on and programs.

But I think inventory levels are good. It seems like there's something at the end of the quarter we've seen some movement either up or down like and if you look at the end of the fourth quarter, we did see somewhat some inventory pullback, or they were decreasing maybe for counting inventory levels and things like that.

Then we saw an increase that we anticipated about 20 million of excess kind of ordering, timing of orders in Q1.

So, we did mention on our earnings call, just because we're seeing those inconsistencies or those adjustments, one could say that we would disclose those on every quarter on what we're seeing. Just so I have a full transparency, but were talking earlier like the scan data, right?

I mean that really shows what's happening versus maybe some timing going into the Pepsi selling into Pepsi on their mixing centers just because it controls such a large percentage of our overall revenue mix now.

A - Unidentified Speaker

We're going to get into the scanner data and the sales trends, I think just to frame it for folks maybe a little bit less familiar. If you think about sales as the output, it would be inputs of how much distribution you have times the velocity that you have in that distribution.

So, if you sit there and just start talking about distribution points, I think one of the things that people ask about is where is this going, right?

Distribution has about doubled since early October when you switched over to the Pepsi system.

But if you compare to where Bang was a peak through a similar distribution system, you're still probably 20%, 30% less. If you compare it to where Monster is today, it's still about 50% of where they are.

So, what's the right level of distribution points as you think about this today?

Not to put you on the spot.

A - John Fieldy

I mean look, distribution points, there's a lot of opportunities out there. I think we're really just getting started where it is.

We just got on the dance floor on a nationwide basis. Distribution points, it's really about we're seeing velocity increase. We're working on velocity. We're keeping a close eye on that, the distribution point opportunities out there.

I think where the biggest opportunity for us right now is really the optimization of some of our distribution that we have and really going really optimizing it with secondary placements, third placements.

We got a big push right now on getting Celsius-branded coolers in a lot of locations as well as we're looking at the overall the opportunity.

A - Toby David {BIO 20749891 <GO>}

I would also just say that we're averaging around 14 SKUs per location and Monster, Red Bull around 23 to 25 SKUs per location. They're also facings, right?

And you get like the Monster Big Green flaw can, which will take up a full row or two full rows just by itself.

That counts as one SKU.

We don't have a super SKU the way that Red Bull or Monster does, but what we do has -- have is some micro super SKUs.

So, I think ultimately what we'd like to see is climb up our SKU count to the same levels as Red Bull or Monster, which won't happen overnight. That's going to take a couple of years, then get that double, triple facings of our top performing SKUs so that we can build out two, three, four shelves the way that they have and create that billboard effect that can drive more trial, especially inconvenience.

So ultimately that's where I think we'd like to go. That's not going to happen next year, maybe in a couple of years.

A - Unidentified Speaker

Yes. That's a good way to think about asking the question in a slightly different way.

So, if you sit there and you take your high share markets like South Florida, how do you think about the total facings that you have there versus the national average?

And is that a reasonable level to get to over time?

If you were to build into that share?

A - Toby David {BIO 20749891 <GO>}

I think ultimately that would be what we aspire to do.

So, obviously being -- we're based out of South Florida.

South Florida is our strongest market. John called it out in the last earnings call around a 22% market share.

A - Unidentified Speaker

Versus an eight nationally.

A - Toby David {BIO 20749891 <GO>}

Versus an eight nationally. And a lot of meat left on the bone.

We feel like Miami is really under-indexed in that 22%, really stronger in West Palm and Fort Lauderdale.

So, a lot of upside that remains there. It's in our backyard and it's where we've poured a lot of resources in over the years.

But we poured resources into Southern California, Dallas, the New England area, and we over-index in all those markets as well.

We just recently expanded into 23 markets nationally, over really call it the last 18 months.

So, if we can take the same playbook that we've had that success within South Florida and replicate that in those other markets, that's when you really have that home run.

A - Unidentified Speaker

Okay. I'm going to keep asking the question in different ways too, because I just think it's such an interesting opportunity for distribution points.

So, as you think about the energy category, right, this is a category that's arguably mature in the U.S. definitely even more so outside the U.S.

Yet it's continuing to add shelf space.

So, if you think about the opportunity within the stores, right, this isn't static to say you're taking share away from somebody else, it's about the category being additive and gaining share in total.

So how do you think about the overall level of doors, level of placements for energy as a category today?

And what's the opportunity over time?

And it's sort of a sub-segment to the question, how do you think about this idea that if an average store has one energy cooler, that you're kind of bursting at the seams and you get a second or third in places where that's an opportunity?

And how does that play into the thinking?

A - John Fieldy

Well I think when we look at where we are in the category, I think we go back 12 months when we were here, we're talking about going after the energy category. That was the big tam. That's the opportunity.

I think what we've learned as Toby was talking about really the food service opportunity. You know, we're seeing Celsius consumed and usage occasions expanding outside traditional energy.

So, we really see going after total beverage as an opportunity.

And when you look at five of the top SKUs in all of beverage, two of them are energy drinks to Red Bull and Monster.

We're seeing usage occasions expand outside of energy with Celsius.

So, the opportunity that we're seeing now is much bigger. I think where we stand here and to your point where there's one cooler, you're seeing a lot of retailers are adding more doors. We're seeing -- we saw the most recent resets.

We saw a lot of retailers expanding their energy placements, their planograms, and their pogs.

You're seeing some CSD's getting reduced. You're seeing some teas and coffee -- cold coffee getting reduced as well.

So, the category is expanding. To your point, you're seeing good growth in the category.

So and retailers, were talking in another meeting about you look at some of the convenience retailers there's the consumption on tobacco and a variety of other things have gone down.

So, they're looking for that incrementality.

The energy category continues to provide that additional growth to get those additional dollar rings.

A - Unidentified Speaker

And you talk about this, you talked about it on earnings calls, you cited data to support it. It seems like Celsius is a lot incremental, whatever that means, to the category, right?

So, you're going less after Monster and Red Bull. These are newer consumers to the category.

So how do you think about what the overall incrementality is and how do you think about that from a category perspective going back to the last question in terms of aiding overall expansion?

A - John Fieldy

Do you want to talk about numerator there?

A - Toby David {BIO 20749891 <GO>}

Yes, sure.

So, I mean numerator states that at Celsius, 24% of our consumers are new to category. Retailers love that because it's just not brand-shifting. Additionally, about 44% is what they term user intensification, which really speaks to the consumers drinking more Celsius than they otherwise would other energy drinks.

So about per numerator, when you combine those, it's about 68% of our consumption is incremental to the category.

So again, retailers love that. For us, that 24% figure of the new to category is really the silver bullet that really shows us that if we can continue to bring that on annual basis and compound that, especially because so many of our consumers are younger and new to category and if we can maintain them over three, four, five, six years, that's where you can really make the noise become the first number three energy brand that could actually make noise with the two big players.

A - Unidentified Speaker

Yes.

If you sit there and think about the channels of opportunity here, right, selling into more traditionally, historically grocery and food, and now transitioning into convenience stores, which is a much bigger opportunity as a driver of category growth, how do you think about framing the opportunity?

Just to put perspective behind it, 70% of Monster and Red Bull sales are from the convenience channel. Your sales today about 56% are from Sea Source. That's up from 51, 52% before the Pepsi deal. How does that evolve over time and what's the opportunity?

A - John Fieldy

Yes. I think that's, I mean if you look at where we're at, so number two energy drink on Amazon got about a 19% share. There just a few share points behind Monster. You know, just the way this brand has been built, to your point, really, convenience has been the last frontier to close that gap, to go after that energy category, and we're there.

So, we're -- you see the opportunity and the trends that are out there. Everyone wants better for you.

You know, Celsius has over seven essential vitamins.

We hit that need state with our green tea, our fruit for position with flavors. Everyone wants more function in the foods they consume.

We hit on that with additional functionalities versus just the function of energy.

Then the last trend is fitness. Fitness is a lifestyle position. It's a megatrend, not only in the U.S.

But globally, and we're firing on that.

And the mix between those three and the packaging and the brand attributes has really been able to really drive sales, drive velocity levels, bring new consumers to the numerator data that Toby was referencing, and we're starting to see that increase.

So, if you look at that share mix, we feel it should be 70%.

But what we're looking at as well, this food service opportunity seems to be extremely unique for an energy drink brand.

So maybe the mix changes because of the usage occasions expanding into the food service opportunities.

I think we don't know, right?

I think if you're sitting here last year and were going after the energy, I would say 70% of our sales should be coming out of convenience.

But what we've learned through the Pepsi partnership, and we're still learning, we're not even 12 months in, but the food service opportunity potentially could change some of the mix, and maybe that makes there a bigger opportunity for the overall brand.

A - Toby David {BIO 20749891 <GO>}

I think what's interesting is you're seeing growth across the whole business by channel. It's just very fascinating. We haven't seen something like that in a while.

If you transition over to the sales velocity side, I think what's most interesting is distribution points, as I said before, have doubled since October.

Yet sales velocities the actual take away the amount of repeat purchase is growing strong double digits with a two-year accelerating, suggesting that in demand is actually accelerating here.

So intuitively, you would think you double distribution points and therefore sales velocities would go down to some degree, right?

Not necessarily decline, but just decelerate.

It hasn't happened. Why?

A - John Fieldy

And at the same time that we doubled distribution points, we launched into the club channel, which has been a massive business for us. Now that is not tracked, right?

You would think that would offset some of the velocity sales as well because they're buying it in a bulk pack variety pack format it's -- the brand's working. We're bringing new consumers in.

We blew out of all the samples.

We had for the morning show.

So, I'm sorry for everyone in the room that didn't get a can we'll have some more this afternoon or tomorrow?

But I don't know what to say.

A - Unidentified Speaker

Free cans versus purchase cans, this might be a different story if we were selling them, we'd see what the Velocity is for, like. Wall Street conferences, that's the next what do you think of gross?

A - John Fieldy

You have a take on that. I mean it's fascinating. The brand's working. I mean it's -- and it's not only working with that core 18 to 24 sweet spot in energy, it's working with an older demographic as well within the category so.

A - Toby David {BIO 20749891 <GO>}

And our household penetration is still very low compared to the two big players.

That's a regional thing as well.

So, as we expand nationally and focus on markets and geo-target and markets where we historically haven't been, that's where you're going to really see this brand take off.

That's why you've continued to see the velocities go up as we've gotten this massive TDP expansion, is because of some of the tactical things we've done to increase our spends in markets around the country that historically we hadn't been exposed in so-called, like in the Midwest or Pac Northwest.

They're not as strong as we are in South Florida or Boston or Dallas or Southern California.

So, as we continue to reinvest in those markets and we're kicking off a lot more capital now than we've ever done before, so we can reinvest into those markets, we would anticipate that hopefully, the velocities continue to increase as we continue to get additional TDP.

A - Unidentified Speaker

If you think about the convenience store channel because these are single-serve cold packages sold typically at the highest average ring, does that then help velocities as well as sea stores expand from where you are to where potentially you could go if you take Monster and Red Bulls proxy?

A - John Fieldy

It should, right?

I mean that's your highest turn segment that we just entered, so it absolutely should.

A - Toby David {BIO 20749891 <GO>}

And we're brand new for the most part within convenience. It was the last channel that we entered. I mean Circle K, second largest e-store chain in the country. I think went into seven or eight of their divisions, of their 13 divisions for the first time just last year. You know, we got better placements this year, some expanded placements.

But we're still in our infancy within this channel.

So when you cite that 56% of our revenue figure, I mean there's still a massive opportunity for us there to continue to drive that.

So we'll see where we go.

A - John Fieldy

I think we've already validated, really the convenience is a massive opportunity. If you go and look at what has transpired at 7-Eleven, I mean this year we launched a green apple cherry flavor with them. It was one of their top launches they've had. It was great, extremely successful.

So, we know it works, and it works on a national level.

So now that we've filled in, really the rest of the convenience store opportunity now it's continued to focus on our disciplined approach of building the brand, activating consumers, and working with our retail partners.

A - Unidentified Speaker

So, let's take a step back. Who is the consumer for Celsius, right?

What is driving all of this consumption growth, all this velocity growth?

So, who's the core consumer?

How do you think about you mentioned awareness before, where's the brand awareness today and where -- and how do you accelerate it?

And maybe just to complicate the question, how do you compare it to Monster and Red Bull, which presumably are much better known brands?

A - John Fieldy

Yes. I think our consumers are about 52% male 48% female. We're very inclusive.

When you look at the mix on where we -- who we target and where we go after.

We target 18 to 24, and it's with the fruit-forward position and the brand attributes, it's bringing in a differentiated consumer than a Red Bull or a Monster.

You know, if you look at the Celsius versus some of the competitors in the set and some of the aggressive tones that are taken that's not Celsius.

So, we're all about living fit, living life inside the gym, originally launched as a pre-workout, still sold today and thousands of gyms across the country.

It's in our DNA. I think that's really helped us as well, coming out of Covid with health and wellness trends being as strong as they are and continue to gain steam.

In regards to the mix of the look at the Monster consumer and Red Bull, they all say 50-50 as well.

So, we're not unique on our tone there. I would say probably a little bit more male on the male side.

We're all targeting this 18 to 24 historically.

But --

A - Toby David {BIO 20749891 <GO>}

I would also add that traditionally we're 25 to 45 up until about two years ago.

It isn't that we've lost that 25 to 45 consumer, it's just that we've aged down and picked up this younger consumer as well.

So, I mean you find people from all walks of life that they don't consider themselves energy drink users. John and I meet people every day wearing Celsius gear, and people come up to us and talk to us about how much they've loved the brand.

And we say oh, what was your energy drink that you drank before?

And they're like, oh, I don't drink energy drinks. Meanwhile, they just told us they drink two Celsius a day. They don't drink energy drinks.

So, there's an interesting pattern that we've seen emerge that not only do we have traditional energy users, but those new consumers to the category, whether it's younger consumers or older consumers. I mean we run into a lot of people in their 50s and 60s that drink Celsius. They are very comfortable with it.

There are people that I could not imagine holding a Monster in their hand.

A - John Fieldy

Yes. I see it as it's also the way the product makes you feel as well. You get a great experience on the product. It's like a sustained energy. It's not this spike and crash.

We hear that over and over again.

I think because of those attributes and the flavor profiles. It opens us up to a much broader consumer, which is very difficult, right, because on the marketing side, you want to target your core consumer.

So, what we do is we target specific communities within certain segments of the population and that's how we're working to build the brand.

A - Unidentified Speaker

Yes. And I think the numbers would bear it out. That even kids a little bit older too, than your target 18- to 24-year-old, right, look at the success in food that's the most mature channel. Look at the success in Costco, right. These are more family-oriented purveyors.

So obviously there's some incrementality there. When you think about the brand awareness, so let's go back to that, so I want to use that as a stepping stone to international.

So, let's start with the U.S. and how you think about brand awareness.

Then I want to ask the same question on international, but let's start with the U.S. piece.

A - John Fieldy

Yes. In regards to the household penetration, we're low single digits on the last data poll we got.

We continue to analyze and build brand awareness each and every day. Like as Toby mentioned, we started off with just five drill deep markets, and we scaled that each year as distribution expanded and opportunities expanded. We're going to further expand upon that in 24 building plans around that.

You know, it's -- the U.S. is extremely important to the overall success on the global opportunity, right?

We need to win in the U.S.

Then we can continue to lay foundational seeds internationally and then build upon them.

But the U.S. is extremely critical. We've seen the best returns on investments in the U.S.

As we put more dollars to work. We're seeing increased velocity rates, increased sales.

So, it's really a balanced approach.

A - Toby David {BIO 20749891 <GO>}

Yes. We're going to be strategic about our international expansion. We've spoken about it before, really target some of the largest international markets for energy. We're going to be methodical, won't be a shocking approach. Pepsi is our preferred international partner for distribution. It doesn't mean we have to use Pepsi, but when you have that opportunity, it certainly makes sense in many of the markets, they have bottlers, they have partners, whether it's Centauri or Britvic in the U.K.

Or Asahi down in Australia. So, we're going to be strategic about this.

But for every dollar that we pour into an international market, that's going to take some time to get back we could be putting into the U.S. where we already know kind of what that ROI looks like.

So, the U.S. is going to continue to be our main focus while we're strategic about which countries we enter and how quickly we roll that out.

A - John Fieldy

And today we do have some international distribution. If you look, we have about a 10 share in Sweden. We've been seeing great success in Finland. We're in the Baltics. If you look at we're in Puerto Rico, you'll see us in South Korea, Taiwan, Hong Kong, Malaysia, Singapore.

We have a fitness distributor in Australia. It's kind of just laying seeds foundationally.

To your point, as we're talking about further success in the U.S., there's going to open up those relationships.

We do have the partnership with Pepsi and obviously, there's huge opportunity internationally.

We need to make sure it's properly structured, because that's going to set the foundation for the future.

So that's the other piece. Make sure the structure is right, value change right. And also, we have the right strategies and execution. You know, entering new markets can be very challenging.

We want to make sure it's done properly.

There's a saying spray and pray?

We don't want to spray and pray.

We want to be very tactical on our approach as we enter markets to make sure it's success.

We build a sustained brand.

A - Unidentified Speaker

And media spend, advertising spend, however, you want to think about it, 20, 22% of sales, roughly. It seems like the right number on a go-forward basis. How do you think about the properties, the sponsorships, the athletes, the events that you want to go after?

Do you want to make those, ideally a global event sponsorship so that you can increase brand awareness?

How important is that?

How do you think about the U.S. versus international spending?

A - John Fieldy

Yes. I mean there's a variety of properties internationally that have international acceptance. I mean Formula 1 is a great example, obviously dominated by Red Bull, but we partnered with Ferrari for the U.S. races.

We got some activations kind of getting some strategic alignments along the way. I think today with the power of social media, the connectivity of the world. The world is super small. It's the smallest it's ever been. Information flies so quickly.

I think a lot of our influencers do have some global awareness, obviously, that can get better as we enter new markets. It's important that we build a brand with clear authenticity as well.

So, working locally with have local insights I think will give us a competitive advantage at the time that we're going to launch in some of these markets.

But there's a variety of international properties to your point, I think Ferrari is an example.

A - Unidentified Speaker

Great. We've got a minute left so maybe last question here thinking about innovation. I think one of the things that people maybe don't appreciate from a Monster perspective is being able to expand usage occasions through innovation has created this runway for growth that I think was a lot longer than people had expected. How do you think about using innovation to do the same thing and what does it look like to you over time?

A - John Fieldy

Yes, right now we've really been focused on flavor innovation come out with some great flavors, fantasy vibe, mint and marshmallow flavor has really opened up new opportunities for us with younger consumers as a sweeter profile, very unique. It creates this experiential marketing activity, almost takes you to a place.

So that's been working out really well. You'll see more great flavors from us.

We just launched Oasis vibe at Coachella was super success at Target and it's going to be expanding to other retailers.

So, when you look at we'll have more to come next year.

But there's opportunities in adjacent categories. I think if you look at the Pepsi portfolio because that's our alignment, there is some potential white spaces in there that could be optimized. And timing and sequencing is extremely key as we go ahead and look at our three-to-five-year plans. Right now, we need to stay focused on our core portfolio and drive the great opportunity that's right in front of us today.

But I agree with you. Look into the future and we are thinking about that.

We got a cross-functional team that meets on a monthly basis innovation team. We're looking at a variety of different adjacent categories and opportunities.

Our powder business has grown exponentially most recently and is looking to be a completely great sizable business for us. If you look at what it's doing at Walmart and Target and a variety of other opportunities, I think with a little focus there, we could go after the on-the-go sticks, we call it.

We have some great flavor combinations. Also, probably can play in some other cross-functional categories as well, so there's a lot out there, but timing, sequencing and focus is very important.

A - Unidentified Speaker

Awesome. We could probably go another half an hour, but we're not.

So John, Toby, thank you, guys.

A - John Fieldy

Excellent.

A - Toby David {BIO 20749891 <GO>}

Thank you.

A - John Fieldy

Thank you, everyone.
